

Claims

I claim:

1. A plug receptacle premold which comprises:  
a rigid plastic housing,

5                   said housing comprising first and second contact pin  
holes, and

                  first and second contact pins,

                  at least one of said pins having male-blade-spaced  
portions at one end and at the other end cooperative valving and  
10               seating portions.

                  2. The premold of claim 1 in which said portions are arranged  
for resilient biasing toward each other.

3. A plug receptacle premold which comprises:  
a rigid plastic housing,

15                   said housing comprising first and second contact pin  
holes, and

                  first and second contact pins,

                  said pins having male-blade-spaced portions at one end  
and at the other end cooperative valving and seating portions.

20               4. The premold of claim 3 in which said valving portion is a  
tongue and said seating portion is a notch.

                  5. The premold of claim 1 which also includes a ground pin  
receptacle,

25                   said receptacle including a longitudinal embossment adapted to  
facilitate use therewith of a round ground pin.

6. The premold of claim 1 which also includes a ground pin receptacle, said receptacle including a circumferential rib and a longitudinal gap.

7. The premold of claim 1 in which a light bulb is electrically held against each said pin.
